Greening the Car Industry John Mikler 2009-01-01 . . . fascinating and stimulating book, which is both comprehensive and partial in equal degree. Peter Wells, *Journal of Environmental Policy and Planning* *Greening the Car Industry* is an innovative book in the Varieties of Capitalism tradition. Its interviews and analysis offer rich insights into why the US car industry struggles, particularly on environmental impact, compared to Japanese and German firms. John Mikler shows that regulatory institutions matter, and how they matter. For the car industry at least, more collaborative forms of capitalism show more promise. Mikler gives us a masterpiece of regulatory scholarship. John Braithwaite, *The Australian National University Corporations*, including those in the car industry, are increasingly keen to proclaim their green credentials. But what motivates firms to reduce the environmental impact of their products? Rather than accepting the conventional wisdom, John Mikler addresses this question in a novel way by taking a comparative institutionalist approach informed by the Varieties of Capitalism literature. Focusing on Germany, the US and Japan, the author shows that national variations in capitalist relations of production are central to explaining how the car industry tackles the issue of climate change, such variations are crucial for understanding the normative as well as material basis for firms motivations. This ground-breaking book will be of great benefit to students and academics, particularly those with an interest in comparative politics, public policy and international political economy. It may also serve as a resource for courses on environmental politics and environmental management as well as aspects of international relations and business/management. Given the book's contemporary policy relevance, it will be a valuable reference for policy practitioners with an interest in industry policy, multinational corporations, the environment, and institutional approaches to comparative politics.
