Field Trials of Health Interventions Richard H. Morrow 2015-06-11 Before new interventions can be used in disease control programmes, it is essential that they are carefully evaluated in "field trials", which may be complex and expensive undertakings. Descriptions of the detailed procedures and methods used in trials that have been conducted in the past have generally not been published. As a

consequence, those planning such trials have few guidelines available and little access to previously accumulated knowledge. In this book the practical issues of trial design and conduct are discussed fully and in sufficient detail for the text to be used as a "toolbox" by field investigators. The toolbox has now been extensively tested through use of the first two editions and this third edition is a comprehensive revision, incorporating the many developments that have taken place with respect to trials since 1996 and involving more than 30 contributors. Most of the chapters have been extensively revised and 7 new chapters have been added.

*Health Financing in Indonesia 2009-01-01* In 2004 the Indonesian government made a commitment to provide its entire population with health insurance coverage through a mandatory public health insurance scheme. It has moved boldly already provides coverage to an estimated 76.4 million poor and near poor, funded through the public budget. Nevertheless, over half the population still lacks health insurance coverage, and the full fiscal impacts of the government's program for the poor have not been fully assessed or felt. In addition, significant deficiencies in the efficiency and equity of the current health system, unless addressed will exacerbate cost pressures and could preclude the effective implementation of universal coverage

(Ue and the desired result of improvements in population health outcomes and financial protection. For Indonesia to achieve UC, systems' performance must be improved and key policy choices with respect to the configuration of the health financing system must be made. Indonesia's health system performs well with respect to some health outcomes and financial protection, but there is potential for significant improvement. High-level political decisions are necessary on key elements of the health financing reform package. The key transitional questions to get there include: [ the benefits that can be afforded and their impacts on health outcomes and financial protection; [ how the more than 50 percent of those currently without coverage will be insured; [ how to pay medical care providers to assure access, efficiency, and quality; [ developing a streamlined and efficient administrative structure; [ how to address the current supply constraints to assure availability of promised services; [ how to raise revenues to finance the system, including the program for the poor as well as currently uninsured groups that may require government subsidization such as the more than 60 million informal sector workers, the 85 percent of workers in firms of less than five employees, and the 70 percent of the population living in rural areas.

*The Future of the Public's Health in the 21st Century* Institute of Medicine 2003-02-01 The anthrax incidents following the 9/11 terrorist attacks put the spotlight on the nation's public health agencies, placing it under an unprecedented scrutiny that added new dimensions to the complex issues considered in this report. *The Future of the Public's Health in the 21st Century* reaffirms the vision of *Healthy People 2010*, and outlines a systems approach to assuring the nation's health in practice, research, and policy. This approach focuses on joining the unique resources and perspectives of diverse sectors and entities and challenges these groups to work in a concerted, strategic way to promote and protect the public's health. Focusing on diverse partnerships as the framework for public health, the book discusses: The need for a shift from an individual to a population-based approach in practice, research, policy, and community engagement. The status of the governmental public health infrastructure and what needs to be improved, including its interface with the health care delivery system. The roles nongovernment actors, such as academia, business, local communities and the media can play in creating a healthy nation. Providing an accessible analysis, this book will be important to public health policy-makers and practitioners, business and community leaders, health advocates, educators and journalists.

Health Data in the Information Age Institute of Medicine 1994-01-01 Regional health care databases are being established around the country with the goal of providing timely and useful information to policymakers, physicians, and patients. But their emergence is raising important and sometimes controversial questions about the collection, quality, and appropriate use of health care data. Based on experience with databases now in operation and in development, *Health Data in the Information Age* provides a clear set of guidelines and principles for exploiting the potential benefits of aggregated health data--without jeopardizing confidentiality. A panel of experts identifies characteristics of emerging health database organizations (HDOs). The committee explores how HDOs can maintain the quality of their data, what policies and practices they should adopt, how they can prepare for linkages with computer-based patient records, and how diverse groups from researchers to health care administrators might use aggregated data. *Health Data in the Information Age* offers frank analysis and guidelines that will be invaluable to anyone interested in the operation of health care databases.

*Caring for People who Sniff Petrol Or Other Volatile Substances* National Health and Medical Research Council (Australia) 2011 These guidelines provide recommendations that outline the critical aspects of infection prevention and control. The recommendations were developed using the best available evidence and consensus methods by the Infection Control Steering Committee. They have been prioritised as key areas to prevent and control infection in a healthcare facility. It is recognised that the level of risk may differ according to the different types of facility and therefore some recommendations should be justified by risk assessment. When implementing these recommendations all healthcare facilities need to consider the risk of transmission of infection and implement according to their specific setting and circumstances.

Preventing Medication Errors Institute of Medicine 2007-01-11 In 1996 the Institute of Medicine launched the Quality Chasm Series, a series of reports focused on assessing and improving the nation's quality of health care. Preventing Medication Errors is the newest volume in the series. Responding to the key messages in earlier volumes of the series—"To Err Is Human (2000), Crossing the Quality Chasm (2001), and Patient Safety (2004)"—this book sets forth an agenda for improving the safety of medication use. It begins by providing an overview of the system for drug development, regulation, distribution, and use. Preventing Medication Errors also examines the peer-reviewed literature on the incidence and the cost of medication errors and the effectiveness of error prevention strategies. Presenting data that will foster the reduction of medication errors, the book provides action agendas detailing the measures needed to improve the safety of medication use in both the short- and long-term. Patients, primary health care providers, health care organizations, purchasers of group health care, legislators, and those affiliated with providing medications and medication-related products and services will benefit from this guide to reducing medication errors.

*Assessing Fitness for Military Enlistment* National Research Council 2006-02-27 The

U.S. Department of Defense (DoD) faces short-term and long-term challenges in selecting and recruiting an enlisted force to meet personnel requirements associated with diverse and changing missions. The DoD has established standards for aptitudes/abilities, medical conditions, and physical fitness to be used in selecting recruits who are most likely to succeed in their jobs and complete the first term of service (generally 36 months). In 1999, the Committee on the Youth Population and Military Recruitment was established by the National Research Council (NRC) in response to a request from the DoD. One focus of the committee's work was to examine trends in the youth population relative to the needs of the military and the standards used to screen applicants to meet these needs. When the committee began its work in 1999, the Army, the Navy, and the Air Force had recently experienced recruiting shortfalls. By the early 2000s, all the Services were meeting their goals; however, in the first half of calendar year 2005, both the Army and the Marine Corps experienced recruiting difficulties and, in some months, shortfalls. When recruiting goals are not being met, scientific guidance is needed to inform policy decisions regarding the advisability of lowering standards and the impact of any change on training time and cost, job performance, attrition, and the health of the force. *Assessing Fitness for Military Enlistment* examines the current physical, medical, and mental health standards for military enlistment in light of (1) trends in the physical condition of the youth population; (2) medical advances for treating certain conditions, as well as knowledge of the typical course of chronic conditions as young people reach adulthood; (3) the role of basic training in physical conditioning; (4) the physical demands and working conditions of various jobs in today's military services; and (5) the measures that are used by the Services to characterize an individual's physical condition. The focus is on the enlistment of 18- to 24-year-olds and their first term of service.

Design and Living Well Gjoko Muratovski 2019-07-10 Just as the term design has been going through change, growth and expansion of meaning, and interpretation in practice and education - the same can be said for design research. The traditional boundaries of design are dissolving and connections are being established with other fields at an exponential rate. Based on the proceedings from the IASDR 2017 Conference, *Re:Research* is an edited collection that showcases a curated selection of 83 papers - just over half of the works presented at the conference. With topics ranging from the introduction of design in the primary education sector to designing information for Artificial Intelligence systems, this book collection demonstrates the diverse perspectives of design and design research. Divided into seven thematic volumes, this collection maps out where the field of design research is now. *Using Frameworks to Cross Interdisciplinary Boundaries: Addressing Wellness* • Traci Rose Rider Increasing interest is seen at the intersection of architecture and health. The built environment has become associated with a number of negative health outcomes including obesity, cancers and diabetes. Engaging design students in these inquiries surrounding health is integral in preparing them for future practice. This paper reviews the conceptual development and tested implementation of an interdisciplinary course focusing on the well-being and overall health of the occupant, using primary and secondary framework structures in the vein of Groat and Wang's logical argumentation. The reviewed course engages interdisciplinary teams composed of students from the School of Architecture, the College of Engineering and the College of Natural Resources, with private practice. The course puts forth an effort to break out of the conventional pedagogical structure found in architectural education, primarily the studio and large lecture spaces. The course has been specifically designed to: (1) establish a framework for common content relating to health in the built environment across disciplinary boundaries; (2) build meaningful partnerships between interdisciplinary student groups; and (3) establish a common vocabulary between architectural education and aligned disciplines regarding health

and the built environment. The course structure, activities and assessments are reviewed, proposing a solid framework for including integrated design and themes of health in architectural education. *Qualities of Public Health: Toward an Analysis of Aesthetic Features of Public Policies* • Sébastien Proulx, Philippe Gauthier, Yaprak Hamarat Design is gaining popularity as a way to address complex social problems in various fields of practices. Strangely, public health which, by nature, is concerned by such kinds of problems, remains foreign to this way of thinking. Building on the increasing popularity of design in policy-making, we stress that public health could also benefit from this conceptual yet pragmatic framework. To open a critical perspective about the potential of design for public health, we examine four design projects that address social determinants of health and whose outcomes promote healthy living habits. Finally, we argue that the interest of design for public health lies on its concern for the users' aesthetic experience emerging of its encounter with the touchpoints that embody health policies. This contribution ought to act as a stepping stone to open a debate about design as offering a critical perspective for the practice and study of public health. *Participatory Design for Behavior Change: An Integrative Approach to Healthcare Quality Improvement* • Fernando Carvalho, Gyuchan Thomas Jun, Val Mitchell Behavior insights have been extensively applied to public policy and service design. The potential for an expanded use of behavior change to healthcare quality improvement has been underlined in the England's National Health Service Five-Year Forward View report, in which staff behavior is connected to the quality of care delivered to patients and better clinical practice. Improving the quality of healthcare service delivery involves adopting improvement cycles that are conducted by multiple agents through systematic processes of change and evaluation. Despite the recognition that some of the recurring challenges to improve healthcare services are behavioral in essence, there is insufficient evidence about how behavioral insights can be successfully applied to quality improvement in healthcare. Simultaneously, the discussion on how to better engage participants in intervention design, and how to better enable participation are not seen as fundamental components of behavior change frameworks. This paper presents an integrative approach, stemming from comprehensive literature review and an ongoing case study, in which participatory design is used as the conduit to activate stakeholder engagement in the application of a behavior change framework, aiming to improve the processes of diagnosing and managing urinary tract infection in the emergency department of a hospital in England. Preliminary findings show positive results regarding the combined use of participatory design and behavior change tools in the development of a shared-vision of the challenges in question, and the collaborative establishment of priorities of action, potential solution routes and evaluation strategies. *Development of a Design Competence Model for Learners of Human-Centered Design* • Christi Zuber Learning a new competence and attempting to perform it within an organization not only takes time, but it is heavily influenced by the real-world context of day-to-day work culture and individual perceptions. The little-understood world of learning Human-Centered Design (HCD) within an organization is studied over 1 year in inside of a group of healthcare organizations through a training and mentoring program called the "Innovation Catalyst Program." Deep insights and personal narratives are gathered by studying learners and their coaches in real-time observations and conversations. A dynamic story unfolds as those who are learning creative approaches for organizational innovation are coached by those with many years of experience on the topic. These same participants provide feedback on the frameworks generated. The result of this Longitudinal Grounded Theory field study is a new actionable model for understanding experiences and approaches to learning HCD within the context of an organization, a novel approach to assessing development, and ultimately, a way to empower individuals with the mindsets and skillsets of HCD for real-world challenges. *Health Education that Breaks through Language Barriers: Prototyping and*

*Evaluation of Child Care-Related ICT Self-Learning Resource* • Toshinori Anzai, Kazuyo Matsuura, Takanobu Yakubo, Tomoko Mikami, Kouta Uemura This paper explores the findings of a study into the telecommunications environment in Mongolia. It was hoped that an effective self-learning resource for the prevention of developmental dysplasia of the hip (DDH) in infants for distribution to parents in that country could be created and evaluated using these findings. Based on a field survey conducted in Mongolia, the most effective format this resource should take was identified. A prototype was created that featured video taken from both a third-person and parent's (first-person) perspective. After further evaluation, this prototype is to undergo revisions that will be assessed in Japan and Mongolia before a final version is distributed utilizing information and communication technologies (ICT). It was found that a visual message that did not rely on written language was the most effective means of communicating the desired message. With input from nursing staff in Mongolia, the Sapporo City University School of Design and School of Nursing came to leverage their respective strengths to create an effective prototype that will be used as the basis for a resource for relaying this preventive information to the target audience.

*Empowering the Preschool Children: A Service Platform Design Aiming at the Communication of Balanced Diet Information* • Xing Zhou Childhood obesity increases the risk of obesity in adulthood and is associated with cardiovascular disease risk factors. The prevalence of overweight and obesity is increasing in China. It is necessary to develop an intervention project for preschool children. Based on a service design project aiming at the communication of balanced diet information to the preschool children in China, this paper discusses how to take advantage of the digital platform and game-based learning to empower the preschool children. It argues for the importance of the DIKW hierarchy for empowerment. It also proposes an innovative model to involve new stakeholders into the whole system and to improve the viability of the project.

*Snack Food Package Design: Exploratory Study on Children's Snack Choices and Design Elements* - Sunghyun R. Kang, Debra Satterfield, Nora Ladjahasan Packaging is an essential element of design for both consumers and businesses. Product packaging functions both as a communication tool for product information and for brand messages. In addition, the role of visual elements and messages on snack packages are not well understood. This is particularly true from the standpoint of influencing the selection of snack food in children, even though there has been growth in the economic power of children as a consumer group. Therefore, this study examines: (1) the role of design variables such as typography, images and the stylistic combination of these visual elements in affecting children's snack food selection; (2) the role of health messages on children's snack food selections; and (3) the role of perceived "healthiness" in influencing children's snack food selections. Digitally simulated snack package images were created and sixty children ages 9-13 were recruited for this study. From these design variables, "preferred-selections" and "perceived healthy-selection" of children in this age group were identified.

*Breaking through Fuzzy Positioning: Diverse Design Communication Strategies for Older Adults' Healthcare Wearables* - Chen Li, Chang-Franw Lee In this study, based on the perception of older adults, fuzzy positioning of healthcare wearables and impacts of differentiated product positioning on human considerations and design communication strategies are studied. Empirical researches are performed by adopting both quantitative research (248 questionnaires for clustering and regression analysis) and qualitative research (15 cases for in-depth interview). The perceptions of older adults on product positioning are divided into three types: Tech-Aid, Fash-Acc and Fash-Tech. Results indicate that the influential human considerations for each positioning were different from each other. Through coding and storyline analysis, diverse communication strategies are found for each positioning. The outcomes for each type are as follows. For Tech-Aid, wherein older adults lay emphasis on usefulness, ease of use and privacy, the designers can adopt a calm communication strategy by giving

priority to older adults' control power, fitting symptoms, user-friendly and cautious interconnection. For *Fash-Acc*, wherein older adults focus on personal image, aesthetic appearance and ease of use, an active communication strategy for modeling a style for elderly fashion that agrees with aesthetic appreciation and simplified operation can be adopted. For *Fash-Tech*, wherein older adults require to integrate usefulness, ease of use, aesthetic appearance, comfort, privacy and self-image, a persuasive communication strategy can be used, through which designers can offer older adults more data insights and entertainment, along with data association, and in the meantime, reduce data interferences and pay attention to style modality and appropriate display with context fusion and contact comfort.

*Developing Design Criteria for iPad Stands to Meet the Needs of Older Adults in Group Settings* • Sonja Pedell, Jeanie Beh, Gianni Renda, Emily Wright This paper details the evaluation process undertaken to create criteria for the development of an iPad stand for elderly users. Emphasis is on the requirements elicitation stage with end users in the field. Thirty-two elderly participants taking part in the activity group as part of the Ageing-Well program of a City Council in a cosmopolitan area in Australia were part of an evaluation in which three existing iPad stands were trialed. While commercially available stands are abundant, specific problems such as reduced grip, basic technical understanding of the stand, and concerns surrounding stability were encountered within the group. Observation and semistructured interviews were undertaken with the cohort to determine factors surrounding the suitability and uptake of these stands by elderly users - most of them with some disabilities - with findings suggesting that current tablet stands require fine levels of dexterity, which may not be appropriate for elderly users where such a device is needed. While usability in setting up the stand and use is a strong factor, aesthetics and material qualities are equally important for enjoyable use. In addition, the use of iPads in social activities between two or more older adults has specific demands in terms of visibility of screen, sturdiness and easy movement that is not considered by current tablet stands. The paper ends with proposing design recommendations. Further research is required to develop a suitable solution and refines these.

*Innovative Handle Design and Evaluation of Woks for Middle-Aged and Elderly People* • Fong-Gong Wu, Yu-Chi Lin, Hsiao-Han Sun With the enhancement of medical technology and human living standards, the world is showing a trajectory toward an aging society. The elders generally suffer from degeneration, which may cause problems in their daily lives. Aging has since become a major issue of scientific researches. Elders in Taiwan mostly live alone or with a partner. Because eating out is not a habit, cooking often plays an important role in their lives. Due to the degeneration happening to their bodies, the danger during cooking activities increases. Therefore, it is necessary for them to seek help from assistive devices. In this research, we will make assistive design models that help elders use woks. The designs are for the task we have chosen from our investigation. We will also evaluate the effect of the aids objectively using the EMG system, and collect the iEMG value for evaluation. The iEMG values were collected from four muscles (FDC, FCR, biceps and deltoids). Eight middle-aged participants who will become elders in the near future were invited to participate in the experiment. Four design solutions were chosen from seven working models. The design solutions were all helpful to the task, and the performances of the stove design solutions are significantly better than the original wok. The degrees of hand trembling while performing tasks were also measured; however, the differences were not significant.

*Designing with and for People with Dementia: Developing a Mindful Interdisciplinary Co-Design Methodology* • Kristina Niedderer, Isabelle Tournier, Donna Maria Coleston-Shields, Michael Craven, Julie Gosling, Julia A. Garde, Ben Salter, Michaele Bosse, Ingeborg Griffioen This paper reports on the development of a mindful interdisciplinary design methodology in the context of the MinD project research into designing for and with people with dementia, which takes the particular focus

on supporting the subjective well-being and self-empowerment of people with early to mid-stage dementia in social context. Existing research is for the most part focused on functional support and safe-keeping from the perspective of the carer. References to decision-making and empowerment are predominantly related to action planning for dementia care or advance care planning. References to care and social interaction show that caregivers tend to take a deficit-oriented perspective, and occupation of people with dementia is often associated with doing "something" with little focus on the meaningfulness of the activity. Furthermore, caregivers and people with dementia tend to differ in their perspectives, e.g. on assistive devices, which might offer support. The MinD project, has therefore developed an interdisciplinary co-design methodology in which the voices to people with dementia contribute to better understanding and developing mindful design solutions that support people with dementia with regard to their the subjective well-being and self-empowerment as well as meaningful and equitable social engagement. This paper discussed the design methodological framework and methods developed for the data collection and design development phases of the project, and their rationale. It thus makes a contribution to interdisciplinary methodologies in the area of design for health. Assessing a Rehabilitation Living Lab Research Project: The Meta-Analysis of an Inclusive Environment for People with Disabilities • Tiiu Poldma, Sylvain Bertin, Sara Ahmed, Guylaine Le Dorze, Keiko Shikako-Thomas This paper presents the results of a research based Living Lab experience, where people participate together as users, researchers, stakeholders and collaborators working to effect change to improve social inclusion and social participation for persons with functional difficulties. The Rehabilitation Living Lab in the Mall (RehabMall) transforms an urban shopping mall into an interdisciplinary, multi-sectorial research platform that supports multiple projects investigating what constitutes an accessible and inclusive environment for people with physical, sensory and cognitive disabilities. We present an overview of the RehabMALL Living Lab, the contexts of the project and the project meta-analysis to present the salient issues emerging from the projects that were done. Grounded in a design research approach, and inspired by the Ecological Systems Theory of Bronfenbrenner (1979), the investigations conducted focus on subjective and inter-subjective experiences within understanding obstacles and facilitators that frame how people experience going to the mall, and how the physical, cognitive and virtual environments that support these activities might be better served. Disability is defined within the framework of the "World Health Organization's International Classification of Functioning." The overview of the project is presented with particular attention to the various collaborations and partnerships created alongside the issues that emerge in terms of results, and how people might be better served when public spaces are designed with their input and within a perspective of universal design.

Urination Changes 2008

Countering the Problem of Falsified and Substandard Drugs Institute of Medicine 2013-06-20 The adulteration and fraudulent manufacture of medicines is an old problem, vastly aggravated by modern manufacturing and trade. In the last decade, impotent antimicrobial drugs have compromised the treatment of many deadly diseases in poor countries. More recently, negligent production at a Massachusetts compounding pharmacy sickened hundreds of Americans. While the national drugs regulatory authority (hereafter, the regulatory authority) is responsible for the safety of a country's drug supply, no single country can entirely guarantee this today. The once common use of the term counterfeit to describe any drug that is not what it claims to be is at the heart of the argument. In a narrow, legal sense a counterfeit drug is one that infringes on a registered trademark. The lay meaning is much broader, including any drug made with intentional deceit. Some generic drug companies and civil society groups object to calling bad medicines counterfeit, seeing it as the deliberate conflation of public health and intellectual property

concerns. *Countering the Problem of Falsified and Substandard Drugs* accepts the narrow meaning of counterfeit, and, because the nuances of trademark infringement must be dealt with by courts, case by case, the report does not discuss the problem of counterfeit medicines.

*Pocket Book of Hospital Care for Children* World Health Organization 2013 The Pocket Book is for use by doctors nurses and other health workers who are responsible for the care of young children at the first level referral hospitals. This second edition is based on evidence from several WHO updated and published clinical guidelines. It is for use in both inpatient and outpatient care in small hospitals with basic laboratory facilities and essential medicines. In some settings these guidelines can be used in any facilities where sick children are admitted for inpatient care. The Pocket Book is one of a series of documents and tools that support the Integrated Managem.

*Price Setting and Price Regulation in Health Care* OECD 2019-06-26 The objectives of this study are to describe experiences in price setting and how pricing has been

used to attain better coverage, quality, financial protection, and health outcomes. It builds on newly commissioned case studies and lessons learned in calculating prices, negotiating with providers, and monitoring changes. Recognising that no single model is applicable to all settings, the study aimed to generate best practices and identify areas for future research, particularly in low- and middle-income settings. The report and the case studies were jointly developed by the OECD and the WHO Centre for Health Development in Kobe (Japan).
