Solution-Focused Case Management, Robert G. Blundo, PhD, LCSW 2015-11-06 "Blundo and Simon have successfully outlined how a solution-focused perspective can be a powerful tool for case managers. Their understanding and presentation is based upon practice scenarios that are real and applied...They clearly demonstrate the impact of 'thinking and language' and the importance of collaborative relationship with clients. Their work challenges the traditional theory-driven interventions that focus on problems and arrive at a diagnosis. They encourage a 'shift' to a co-therapeutic partnership that requires a practitioner to respect that clients are 'experts of their own lives'...They provide a clear step-wise discussion of techniques and strategies that can be employed with individuals and families in case management settings. This book is a must read." -Lawrence T. Force, PhD, LCSW-R Professor of Psychology, Mount Saint Mary College, Newburgh, NY From Solution-focused practice is a paradigm that stresses client abilities, strengths, and individual goals rather than disability. Written by a team of educator/practitioners noted for their expertise in solution-focused therapy, this "how-to" text for social work, counseling, and psychology students guides current and future case managers in learning this strengths-based, collaborative approach. It discusses both the philosophical basis for solution-focused casework and demonstrates how it is ideally suited for the case management process. The book is based on teaching materials developed and used in their classes and workshops with undergraduate and graduate students and professionals. The text incorporates new research and theoretical developments in solution-focused practice as well as actual practice scenarios demonstrating the process of building a collaborative relationship with individual clients and families. Replete with strategies and tools for practicing solution-focused management, the text describes such essential skills as identifying goals, monitoring progress, working with other agencies, and transitioning out of treatment. It discusses issues related to self-care. Additionally, the book addresses diversity and social justice and their relationships to solution-focused practice. Student exercises help to reinforce knowledge and assist case managers in a variety of settings—hospitals, nursing homes, rehabilitation facilities, community-based mental health agencies, schools, prisons, court systems, and shelters for victims of domestic violence—to partner with their clients towards finding strengths-based and solution-focused approaches to resolving issues in a positive way. Key Features: Authored by leading solution-focused education and practice Facilitates a reframing of casework and case management around client strengths and resources Provides specific case examples that allow readers to apply solution-focused principles to practice Includes student exercises throughout the book

Water-Rock Interaction, Two Volumes, Bernd B. Wany 2004-09-02 The interaction of the lithosphere and hydrosphere sets the boundary conditions for life, as water and the nutrients extracted from rocks are essential to all known life-forms. Water-rock interaction also affects the fate and transport of pollutants, mediates the long-term cycling of fluids and metals in the earth's crust, and plays a key role in the global engineering cycle.

Engineering Ethics for a Globalized World, Stephen J. Murphy 2015-06-22 This volume identifies, discusses and addresses the wide array of ethical issues that have emerged for engineers due to the globalization of the global economy. To date, there has been no systematic treatment of the particular challenges globalization poses for engineering ethics standards and education. This volume concentrates on the challenge. Scholars and practitioners from diverse national and professional backgrounds discuss the ethical issues emerging from the inherent symbiotic relationship between the engineer and the globalized world. Through their discussions a deeper and more complete understanding of the precise ways in which globalization impacts the formulation and justification of ethical standards and practices, as well as the curriculum and pedagogy of engineering ethics education emerges. The world today is witnessing an unprecedented demand for engineers and other science and technology professionals at advanced degrees due to both the off-shoring of western jobs and the rapid development of non-Western countries. The current flow of technology and professionals is from the West to the East. Professional practices followed by Western (or Western-trained) engineers are often based on presuppositions which can be in fundamental disagreement with the viewpoints of non-Western engineers. Engineering education cannot be simply technically sound, but also must account for cultural, social and religious constraints. For these reasons, existing Western standards cannot simply be applied to other countries. Divided into two parts, Part I of the volume provides an overview of particular dimensions of globalization and the criteria that an adequate engineering ethics framework must have to be globally applicable. Part II of the volume considers pedagogical challenges and aims in engineering ethics education that is global in character.

The Art of Solution Focused Therapy Connie, MA, LPC 2009-06-15 What is Solution-Focused Therapy? Solution Focused Therapy (SFT) is a unique, goal-directed therapy aimed at helping clients regain autonomy by determining and achieving their own goals. Solution focused therapists encourage clients to focus on solutions, not problems, and help clients effectively plan how to achieve their goals. Unlike other therapies, SFT holds an abiding belief in clients' abilities to know what is best for them, rather than have a therapist tell them. Why this book? This book not only provides an overview of the Solution Focused therapy model, its basic tenets, and theories; it also presents intimate interviews with expert practitioners—all of whom use SFT in their own practice. To this end, the book provides insight into the theory and practice of SFT, to help practitioners decide whether SFT is right for them and their clients. These experts offer details of their apprehensions, goals, breakthrough experiences with the therapy. The team of expert contributors includes Eve Lipchik, Yvonne Dolan, Alasdair Macdonald, Thorana Nelson, and many more. Questions the experts address include: How do you discover that SFT was the model that fit your clients' needs? What characteristics of this model drew you towards it? How has SFT impacted your personal life? What is it about SFT that makes it so effective? What are your favorite cases and how did they affect your work as a therapist?

Illustrating the breadth and depth of contemporary practice, the Handbook of Solution-Focused Therapy brings together contributions from leading practitioners in fields such as social work, health care to show how solution-focused techniques can be effective in many different situations. Beginning with an introduction to the origins and theory of the approach, the book explains the practice, explaining how and why the solution-focused approach is applicable and highlighting the issues specific to each context. Each chapter features a case-example, which demonstrates the advantages and difficulties, involved in using the solution-focused approach. The Handbook of Solution-Focused Therapy is an ideal text for training courses in solution-focused therapy and for practitioners trained in other approaches who want to integrate solution-focused techniques with their existing practice. Solutions for the "treatment-resistant" Addict Nicholas A. Roes 2002 Roes has directed a residential substance abuse treatment facility in upstate New York for 12 years, where he has refined the techniques he describes here. Because research suggests that techniques are more likely to work if both the counselor and the patient have confidence in them, he offers a wide range of techniques to become familiar with when dealing with recalcitrant cases. Social Work Treatment Francis J. Turner 2017-03-23 First published in 1974, Social Work Treatment remains the most popular and trusted compendium of theories available to social work practitioners. It explores the full range of theoretical approaches that drive social work treatment and knowledge development, from psychoanalysis to crisis intervention. A treasure trove of knowledge, the text equips professionals with a broad array of theoretical approaches, each of which shine a spotlight on a different aspect of the human condition. Emphasizing the importance of a solution-based theoretical approach to practice, it helps readers avoid the pitfalls of becoming overly identified with a narrow focus that limits their understanding of clients and their contexts. The text of the field untangles the increasingly complex problems, ideologies, and value sets that define contemporary social work practice. The result is an essential A-to-Z reference that charts the field's theoretical approaches available to social workers, regardless of their setting or specialty.

Advances in Cryptology — ASIACRYPT 2003 Kazuo Ohta 2003-06-29 ASIACRYPT'98, the international conference covering all aspects of theory and application of cryptology and information security, was held at Beijing Friendship Hotel from October 18 to 22. This is the fourth of the Asiacypt conferences. ASIACRYPT'98 is sponsored by the State Key Laboratory of Information Security, Chinese Academy of Science and Technology of China (USTC), and the Asiacypt Steering Committee (ASC), in cooperation with the International Association for Cryptology Research (IACR). The 1998 Program Committee organized the scientific program and considered 118 submissions. Of these, 32 were accepted for presentation. The authors' affiliations of the 118 submissions and their countries range over 18 and 13 countries or regions, respectively. The submitted version of each paper was sent to all members of the Program Committee and was extensively examined by at least two members and/or outside experts. The review process was rigorously blinded and the anonymity of each submission are maintained until the selection was completed. We followed the tradition of the Program Committee could be an author of at most one accepted paper. These proceedings contain the revised versions of the 32 contributed talks as well as a short note on the program.

Microcirculatory Effects of Hemoglobin Solutions S. V. Nussner 2004 Solutions of stroma-free hemoglobin have been investigated for their potential as blood replacement fluids for more than 70 years. Many attempts to overcome their unwanted side effects through chemical modification of the hemoglobin molecule, none of the potential solutions has been approved for clinical use in the United States. In recent years, the vasoconstrictive activity of hemoglobin in the plasma was identified as the pivotal problem of hemoglobin-based blood substitutes, compromising nutritional performance by impeding oxygen unloading at the site of the microcirculation. One of the prevailing assumptions is that the precapillary vasoconstriction and the ensuing tissue underperfusion is caused by the release of free hemoglobin for nitric oxide. To resolve this problem, a number of recombinant techniques involving site-directed mutagenesis as well as several chemical approaches involving polymer conjugation have been developed. This volume summarizes the latest research on the effects of some of these new hemoglobin solutions on the microvasculature and tissue oxygenation. It is a must-reading for all those interested in finding alternatives for donor blood in transfusion medicine, including emergency specialists, anesthesiologists, surgeons, trauma surgeons and other clinicians who are frequently confronted with blood loss and the need for blood replacement.

Splitting Methods for Partial Differential Equations with Rough Solutions Heiko Holden 2010 Operator splitting (or the fractional steps method) is a very common tool to analyze nonlinear partial differential equations both numerically and analytically. By applying operator splitting to a complicated model one can often split it into simpler problems that can be analyzed separately. In this book, the author develops splitting for a family of nonlinear evolution equations, including hyperbolic conservation laws and degenerate convection-diffusion equations. Common for these equations is the prevalence of discontinuous, smooth, solutions, e.g., shocks. Rigorous analysis is presented, showing that both semi-discrete and fully discrete splitting methods converge. For conservation laws, sharp error estimates are derived. Convection-diffusion equations one discusses a priori and a posteriori correction of entropy errors introduced by the splitting. Numerical methods include finite difference and finite volume methods. The theory is illustrated by numerous examples. There is a dedicated web page that provides MATLAB codes for many of the examples. The book is suitable for graduate students in pure and applied mathematics, physics, and engineering.

Lectures on Global Optimization Ramos M. Pardalos 2009 A large number of mathematical models in many diverse areas of science and engineering have lead to the formulation of optimization where the best solution (globally optimal) is needed. Due to the interdisciplinary nature of global optimization, there has been astonishing progress in this field during the last few decades. computational algorithms and new theoretical developments have been introduced to solve a spectrum of hard problems in several disciplines. This book covers a small subset of recent in global optimization with emphasis on recent theoretical developments and scientific applications. The chapters are based on the talks presented at the workshop on 'Global Optimization: Mathematical Applications' that was held at the Fields Institute from May 11-12, 2007. The target audience includes graduate students in mathematics, engineering, and sciences, academic researchers and practitioners, who use global optimization for their specific needs and applications.

Solution Focused Practice in Asia Debbie Hogan 2016-12-08 This book is a collection of solution focused practice across Asia, offering case examples from the fields of therapy, supervision, coaching and organisation consulting. It demonstrates the usefulness of the solution focused approach in the Asian context by providing practice based evidence, and highlights the diverse sharing real case examples in action across Asia, it is the aim of this book to stimulate the curious and inspire the converted. It gives readers a taste of what it is like to use this approach in different areas of practice and within a broad spectrum of clinical issues. The examples offer exciting and creative ways in which solution focused practice can be used within the context, with the hope that more practitioners will be curious enough to give solution focused practice serious consideration as a viable, evidence-based practice.

Collaborative, Competency-based Counseling and Psychotherapy Robert A. Tolino 2002 This is the first book to fully explore a collaborative, competency-based orientation to counseling and psychotherapy. 40 years of outcome research examining what works in therapy, mental health professionals are introduced to numerous ways of collaborating with clients from assessment through intervention to termination. Throughout the book, ideas are offered to illustrate how mental health professionals can promote the therapeutic relationship and facilitate positive change through respectful practices. This book introduces readers to the importance of language in both the construction of problems and solutions. Readers are offered multiple ways of using language as a vehicle for change. While new ideas are offered, the book also honors traditional theoretical underpinnings while challenging readers to work collaboratively with clients to find out what works for them. For students, practicing counselors, social workers, etc. This book offers the new clinician and the seasoned one a perspective that honors the contributions of clients and clinicians alike while achieving of realistic and attainable outcomes.

Twenty-Third Symposium on Naval Hydrodynamics National Research Council 2002-01-01 "Vive la Revolution!" was the theme of the Twenty-Third Symposium on Naval Hydrodynamics held in Valenciennes, France, from September 17-22, 2000 as more than 140 experts in ship design, construction, and operation came together to exchange naval research developments. The forum encouraged an informal discussion of presented papers, and the occasion provides an opportunity for direct communication between international peers. This book includes sixty-three papers presented at the symposium which was organized jointly by the Office of Naval Research, the National Research Council (Naval Studies Board), and the Bassin d'Essais des Carènes. This book includes the ten topical areas of the symposium: wave-induced motions and loads, hydrodynamics in ship design, propulsor hydrodynamics and hydroacoustics, CFD validation, viscous ship hydrodynamics, cavitation and bubble dynamics, wake dynamics, shallow water hydrodynamics, and fluid dynamics in the naval context.

Environmental and Hydrological Systems Modelling M. A. Winwardena 2013-12-17 Mathematical modelling has become an indispensable tool for engineers, scientists, planners, decision makers and other professionals to make predictions of future scenarios as well as real impending events. As the modelling approach and the model to be used are problem specific, no single model or method can solve all problems, and there are constraints in each situation. Modellers therefore need to have a choice when confronted with constraints such as lack of sufficient data, resources, and time. Environmental and Hydrological Systems Modelling provides the tools needed by presenting different approaches to modelling the water environment over a range of spatial and temporal scales. Applications are shown with a series of case studies, taken mainly from the Asia-Pacific Region. Coverage includes: Population dynamics Reaction kinetics Water quality systems Longitudinal dispersion series analysis and forecasting Artificial neural networks Fractals and chaos Dynamical systems Support vector machines Fuzzy logic systems Genetic algorithms and genetic programming and much more. This book has great value to advanced students, professionals, academics and researchers working in the water environment.

Research Anthology on School Shootings, Peer Victimization, and Solutions for Building Safer Educational Institutions Emerald Group Publishing Information Resources 2020-09-10 Though decades ago school shootings were rare events, today they are becoming normalized. Active shooter drills have become more commonplace as pressure is placed on schools and law enforcement to protect students. Yet others argue the traumatizing effects of such exercises on the students. Additionally, violence between students continues to remain problematic as bullying pervades children's lives at home, leading to negative mental health impacts and, in extreme cases, suicide. Establishing safer school policies, promoting violence prevention programs, building healthier classroom environments, and providing better staff training are all vital for protecting students physically and mentally. The Research Anthology on School Shootings, Peer Victimization, and Solutions for Building Safer Educational Institutions examines the current sources of violence within educational systems, and it offers solutions on how to provide a safer space for both students and educators alike. Broken into three parts, it examines the causes and impacts that peer victimization has on students and how this can lead to further violence and investigates strategies for detecting the warning signs. The book covers a wide range from policies and programs that can be established to strategies for teaching nonviolence and promoting coexistence in the classroom. Highlighting a range of topics such as violence prevention, climate, and bullying, this publication is an ideal reference source for school administrators, law enforcement, teachers, government and state officials, school boards, academicians, researchers, and parents.

The Professional Student Affairs Administrator Eugene B. Winston 2013-08-21 Styled as a complete update to the 1991 book "Administration and Leadership in Student Affairs", this work addresses the importance to student affairs professionals. Grounded in human development, learning, leadership, group dynamics, management theories, and social science research and evaluation methods, it articulates the means for college student affairs administrators to function in the forefront of student learning and personal development initiatives. The book focuses on the three essential roles of student affairs administrators: as educators who play a significant role in addressing the academic goals of their institutions, as leaders who help to shape the vision of their institution's future, and as managers who are responsible for co-ordinating programs and services, supervising staff, and overseeing university facilities and budgets.

Working with Violence and Confrontation Using Solution Focused Approaches April B. Hieser 2016-10-21 An authoritative, interdisciplinary book which outlines how solution focused practice is particularly effective in addressing violent behaviour in clients and service users, encompassing work with both adults and children. Solution focused approaches have been used successfully with a range of behaviours from school-based bullying to severe domestic violence, as well as with victims of violence. Solution focused approaches hold people accountable for building solutions to their problems. The book shows how to engage clients in solution talk as opposed to problem talk, set useful goals and help clients to develop new behaviours. It outlines the practice principles and work activities that make up solution focused practice with physical, emotional and sexual violence. Illustrative case studies and practice activities are provided. This book is suitable for anyone working to help change violent behaviour, including social workers, counsellors, therapists, nurses, probation workers and youth offending teams.
