Critical CALL – Proceedings of the 2015 EUROCALL Conference, Padova, Italy Francesca Helm 2015-12-02 The theme of the conference this year was *Critical CALL*, drawing inspiration from the work carried out in the broader field of *Critical Applied Linguistics*. The term 'critical' has many possible interpretations, and as Pennycook (2001) outlines, has many concerns. It was from these that we decided on the conference theme, in particular the notion that we should question the assumptions that lie at the basis of our praxis, ideas that have become 'naturalized' and are not called into question. Over 200 presentations were delivered in 68 different sessions, both in English and Italian, on topics related specifically to the theme and also more general *CALL* topics. 94 of these were submitted as extended papers and appear in this volume of proceedings.

Tuning, Timbre, Spectrum, Scale William A. Sethares 2013-06-05 *Tuning, Timbre, Spectrum, Scale* focuses on perceptions of consonance and dissonance, and how these are dependent on timbre. This also relates to musical scale: certain timbres sound more consonant in some scales than others. Sensory consonance and the ability to measure it have important implications for the design of audio devices and for musical theory and analysis. Applications include methods of adapting sounds for arbitrary scales, ways to specify scales for nonharmonic sounds, and techniques of sound manipulation based on maximizing (or minimizing) consonance. Special consideration is given here to a new method of adaptive tuning that can automatically adjust the tuning of a piece based its timbral character so as to minimize dissonance. Audio examples illustrating the ideas presented are provided on an accompanying CD. This unique analysis of sound and scale will be of interest to physicists and engineers working in acoustics, as well as to musicians and psychologists.
