Combating AIDS Arvind Singhal 2003 `This gripping narrative not only documents the history of humankind's interaction with a clever virus, it brings to the forefront the much and understated and underused role of communication in HIV and AIDS prevention, care and treatment. Singhal and Rogers remind us that our global environment is shaped by powerful communication means and methods that, if properly harnessed, can help defeat the plague of the 21st century' - Neil McKee, Senior Technical Advisor for HIV//AIDS and Adolescent Health, Johns Hopkins University HIV//AIDS is a matter of global concern. The world is now more than 20 years into the HIV//AIDS crisis with no vaccine in sight, and relatively few effective and sustainable prevention programs. Although the rate of HIV infection and AIDS deaths has declined in the richer nations of the developed world, infection rates are soaring in developing countries. AIDS is now the leading cause of death in Africa, and the fourth leading cause of death globally.

Sex and the City Philip Hubbard 2019-06-04 This title was first published in 2000: Prostitution has always played a crucial symbolic role in the definition of moral and sexual standards and, as such, the figure of the prostitute has been paradigmatic in the history of the sex and the city. Focusing on the geographies of female prostitution in Western societies, this book explores the nature of sites of sex work and the ways they shape the lives of prostitutes (and their clients). In so doing, the book aims not simply to present a static "mapping" of sex work, but seeks to highlight how these public and private sites are struggled over, with prostitutes often resisting the strategies of social and legal control designed to regulate their working practices. The book consequently engages with a number of contemporary debates in social, cultural and gender geography surrounding the importance of public and private spaces in producing (and reproducing) gender, sex and bodily identities.

How We Live and Why We Die Lewis Wolpert 2009-04-02 How do we move, think and remember? Why do we get ill, age and die? Distinguished biologist Lewis Wolpert explains how cells provide the answers to the fundamental questions about our lives. Cells are the basis of all life in the universe. Our bodies are made up of billions of them: an incredibly complex society that governs everything, from movement to memory and imagination. When we age, it is because our cells slow down; when we get ill, it is because our cells mutate or stop working. In *How We Live and Why We Die*, Wolpert provides a clear explanation of the science that underpins our lives. He explains how our bodies function and how we derive from a single cell - the egg. He examines the science behind the topics that are much discussed but rarely understood - stem-cell research, cloning, DNA - and explains how all life evolved from just one cell. Lively and passionate, *How We Live and Why We Die* is an accessible guide to understanding the human body and, essentially, life itself.

The Chimp and the River David Quammen 2015-05-01 The real story of AIDS - how it originated with a virus in a chimpanzee, jumped to one human and infected more than 60 million people - is very different from what most of us think we know. Recent research has revealed dark surprises and yielded a radically new scenario of how AIDS began and spread. Excerpted and adapted from *Spillover*, with a new introduction by the author, Quammen's hair-raising investigation tracks the virus from chimpanzee populations in the jungles of the southeastern Cameroon to laboratories across the globe, as he unravels the mysteries of when, where and how such a consequential 'spillover' can happen. An audacious search for answers amid more than a century of data, *The Chimp and the River* tells the haunting tale of one of the most devastating pandemics of our time.

Drawn Out Don Nace 2005 Drawn in the spirit of Harvey Pekar's *American Splendor*, this raw, gritty, intimate portrayal of the artist's daily struggles with women, religion, work, and alcoholism reveals life as a struggle to survive. Original.

HIV/AIDS: A Very Short Introduction Alan Whiteside OBE 2008-01-24 HIV/AIDS is without doubt the worst epidemic to hit humankind since the Black Death. The first case was identified in 1981; by 2004 it was estimated that about 40 million people were living with the disease, and about 20 million had died. Despite rapid scientific advances there is still no cure and the drugs are expensive and toxic. Because of controversies and taboos surrounding safe drug usage and prostitution, the numbers of people infected continues to rise. However, it is in the developing world and especially parts of Africa that the real catastrophe is unfolding. In some of the worst affected countries life expectancy has plummeted to below 35 years, which has led to a serious decline in economic growth, a sharp rise in orphaning, and the imminent collapse of health care systems. The news is not all bleak though. There have been unprecedented breakthroughs in understanding diseases and developing drugs. Because the disease is so closely linked to sexual activity and drug use, the need to understand and change behaviour has caused us to reassess what it means to be human and how we should operate in the globalising world. This Very Short

Introduction provides an introduction to the disease, tackling the science, the international and local politics, the fascinating demographics, and the devastating consequences of the disease, and explores how we have \square and must \square respond. ABOUT THE SERIES: The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area. These pocket-sized books are the perfect way to get ahead in a new subject quickly. The Cambridge Introduction to Satire Jonathan Greenberg 2018-12-20 In satire, evil, folly, and weakness are held up to ridicule - to the delight of some and the outrage of others. Satire may claim the higher purpose of social critique or moral reform, or it may simply revel in its own transgressive laughter. It exposes frauds, debunks ideals, binds communities, starts arguments, and evokes unconscious fantasies. It has been a central literary genre since ancient times, and has become especially popular and provocative in recent decades. This new introduction to satire takes a historically expansive and theoretically eclectic approach, addressing a range of satirical forms from ancient, Renaissance, and Enlightenment texts through contemporary literary fiction, film, television, and digital media. The beginner in need of a clear, readable overview and the scholar seeking to broaden and deepen existing knowledge will both find this a lively, engaging, and reliable guide to satire, its history, and its continuing relevance in the world.

Indonesia, Etc.: Exploring the Improbable Nation Elizabeth Pisani 2014-06-23 "A spectacular achievement and one of the very best travel books I have read." \square Simon Winchester, Wall Street Journal Declaring independence in 1945, Indonesia said it would "work out the details of the transfer of power etc. as soon as possible." With over 300 ethnic groups spread across over 13,500 islands, the world's fourth most populous nation has been working on that "etc." ever since. Author Elizabeth Pisani traveled 26,000 miles in search of the links that bind this disparate nation.

Sizwe's Test Jonny Steinberg 2008-02-12 At the age of twenty-nine, Sizwe Magadla is among the most handsome, well-educated, and richest of the men in his poverty-stricken village. Dr. Hermann Reuter, a son of old South West African stock, wants to show the world that if you provide decent treatment, people will come and get it, no matter their circumstances. Sizwe and Hermann live at the epicenter of the greatest plague of our times, the African AIDS epidemic. In South Africa alone, nearly 6 million people in a population of 46 million are HIV-positive. Already, Sizwe has watched several neighbors grow ill and die, yet he himself has pushed AIDS to the margins of his life and associates it obliquely with other people's envy, with comeuppance, and with misfortune. When Hermann Reuter establishes an antiretroviral treatment program in Sizwe's district and Sizwe discovers that close family members have the virus, the antagonism between these two figures from very different worlds -- one afraid that people will turn their backs on medical care, the other fearful of the advent of a world in which respect for traditional ways has been lost and privacy has been obliterated -- mirrors a continent-wide battle against an epidemic that has corrupted souls as much as bodies. A heartbreaking tale of shame and pride, sex and death, and a continent's battle with its demons, Steinberg's searing account is a tour-de-force of literary journalism.

The Wisdom of Whores: Bureaucrats, Brothels, and the Business of AIDS Elizabeth Pisani 2008-06-17 A flame-throwing epidemiologist talks about sex, drugs, and the mistakes (dismal), ideologies (vicious), and hopes (realistic) of international AIDS prevention. When people ask Elizabeth Pisani what she does for a living, she says, "sex and drugs." As an epidemiologist researching AIDS, she's been involved with international efforts to halt the disease for fourteen years. With swashbuckling wit and fierce honesty, she dishes on herself and her colleagues as they try to prod reluctant governments to fund HIV prevention for the people who need it most: drug injectors, gay men, sex workers, and johns. Pisani chats with flamboyant Indonesian transsexuals about their boob jobs and watches Chinese streetwalkers turn away clients because their SUVs aren't nice enough. With verve and clarity, she shows the general reader how her profession really works; how easy it is to draw wrong conclusions from "objective" data; and, shockingly, how much money is spent so very badly. "Exhibit A": the 45 billion taxpayer dollars the Bush administration is committing to international AIDS programs.

Working Ethics Richard Rowson 2006 Working Ethics sets out an ethical foundation for professionals and for the professions in a modern, culturally complex society. Rowson shows how this ethical framework can enable professionals to work more effectively, earn trust, mutual support and respect, and how it can foster democratic ideals in the workplace and community.

Conundrum Jan Morris 2011-02-03 As one of Britain's best and most loved travel writers, Jan Morris has led an extraordinary life. Perhaps her most remarkable work is this grippingly honest account of her ten-year transition from man to woman - its pains and joys, its frustrations and discoveries. On first publication in 1974, the book generated enormous interest and curiosity around the world, and was subsequently chosen by The Times as one of the '100 Key Books of Our Time'. Including a new introduction, this re-issue marks a return to that particular journey. 'Certainly the best first-hand account ever written by a traveller across the boundaries of sex.' Daily Mail

HIV/AIDS Dr. Biswaroop Roy Chowdhury 2018-04-30 This book touches the most sensitive subject of the modern world. The truth given in the book is going to shake the faith of humanity on modern medicine forever. To avoid the confusion and misunderstanding about the reality of HIV/AIDS hypothesis and keeping in mind that the subject is already too complicated with lot of stigma and taboo attached around it, the book is divided into two sections. Section I attempts to explain the whole story in a plain language, while the section II is in a format more acceptable to the scientific community. However, the examples in both the sections are mutually exclusive. With this, I hope the book will be able to relieve the mankind of the economic, social and psychological burden of HIV/ AIDS...forever.

AIDS in Pakistan Ayaz Qureshi 2017-10-17 This book is the first full-length study of HIV/AIDS work in relation to government and NGOs. In the early 2000s, Pakistan's response to HIV/AIDS was scaled-up and declared an area of urgent intervention. This response was funded by international donors requiring prevention, care and support services to be contracted out to NGOs - a global policy considered particularly important in Pakistan where the high risk populations are criminalized by the state. Based on unparalleled ethnographic access to government bureaucracies and their dealings with NGOs, Qureshi examines how global policies were translated by local actors and how they responded to the evolving HIV/AIDS crisis. The book encourages readers to reconsider the orthodoxy of policies regarding public-private partnership by critiquing the resulting changes in the bureaucracy, civil society and public goods. It is a must-read for students, scholars and practitioners concerned with neoliberal agendas in global health and development.

The Secret World of Oil Ken Silverstein 2014-05-13 The oil industry provides the lifeblood of modern civilization, and bestselling books have been written about the industry and even individual companies in it, like ExxonMobil. But the modern oil industry is an amazingly shady meeting ground of fixers, gangsters, dictators, competing governments, and multinational corporations, and until now, no book has set out to tell the story of this largely hidden world. The global fleet of some 11,000 tankers--that's tripled during the past decade--moves approximately 2 billion metric tons of oil annually. And every stage of the route, from discovery to consumption, is tainted by corruption and violence, even if little of that is visible to the public. Based on trips to New York, Washington, Houston, London, Paris, Geneva, Phnom Penh, Dakar, Lagos, Baku, and Moscow, among other far-flung locals, *The Secret World of Oil* includes up-close portraits of a shadowy Baku-based trader; a high-flying London fixer; and an oil dictator's playboy son who has to choose one of his eleven luxury vehicles when he heads out to party in Los Angeles. Supported by funding from the prestigious Open Society, this is both an entertaining global travelogue and a major work of investigative reporting.

Debt David Graeber 2012 Economic history states that money replaced a bartering system, yet there isn't any evidence to support this axiom. Anthropologist Graeber presents a stunning reversal of this conventional wisdom. For more than 5000 years, humans have used elaborate credit systems to buy and sell goods. Since the beginning of the agrarian empires, humans have been divided into debtors and creditors. Through time, virtual credit money was replaced by gold and the system as a whole went into decline. This fascinating history is told for the first time.

Women at Work in the Deuteronomistic History Mercedes L. Garcia Bachmann 2013 Behind Deuteronomy's reflection on history is a host of support staff, mostly anonymous women, who harvest, glean, cook, fetch water and wash, spin and weave, heal the sick, bury the dead and much more. This study considers women's work in the Hebrew Bible.

Tinderbox Craig Timberg 2012-03-01 In this groundbreaking narrative, longtime Washington Post reporter Craig Timberg and award-winning AIDS researcher Daniel Halperin tell the surprising story of how Western colonial powers unwittingly sparked the AIDS epidemic and then fanned its rise. Drawing on remarkable new science, Tinderbox overturns the conventional wisdom on the origins of this deadly pandemic and the best ways to fight it today. Recent genetic studies have traced the birth of HIV to the forbidding equatorial forests of Cameroon, where chimpanzees carried the virus for millennia without causing a major outbreak in humans. During the Scramble for Africa, colonial companies blazed new routes through the jungle in search of rubber and other riches, sending African porters into remote regions rarely traveled before. It was here that humans first contracted the strain of HIV that would eventually cause 99 percent of AIDS deaths around the world. Western powers were key actors in turning a localized outbreak into a sprawling epidemic as bustling new trade routes, modern colonial cities, and the rise of prostitution sped the virus across Africa. Christian missionaries campaigned to suppress polygamy, but left in its place fractured sexual cultures that proved uncommonly vulnerable to HIV. Equally devastating was the gradual loss of the African ritual of male circumcision, which recent studies have shown offers significant protection against infection. Timberg and Halperin argue that the same Western hubris that marked the colonial era has hampered the effort to fight HIV. From the United Nations AIDS program to the Bush administration's historic relief campaign, global health officials have favored well-meaning Western approaches--abstinence campaigns, condom promotion, HIV testing--that have proven ineffective in slowing the epidemic in Africa. Meanwhile they have overlooked homegrown African initiatives aimed squarely at the behaviors spreading the virus. In a riveting narrative that stretches from colonial Leopoldville to 1980s San Francisco to South Africa today, Tinderbox reveals how human hands unleashed this epidemic and can now overcome it, if only we learn the lessons of the past.

Race Against Time Stephen Lewis 2005-10-01 "I have spent the last four years watching people die." With these wrenching words, diplomat and humanitarian Stephen Lewis opens his 2005 CBC Massey Lectures. Lewis's determination to bear witness to the desperate plight of so many in Africa and elsewhere is balanced by his unique, personal, and often searing insider's perspective on our ongoing failure to help. Lewis recounts how, in 2000, the United Nations Millennium Summit in New York introduced eight Millennium Development Goals, which focused on fundamental issues such as education, health, and cutting poverty in half by 2015. In audacious prose, alive with anecdotes ranging from maddening to hilarious to heartbreaking, Lewis shows why and how the international community is falling desperately short of these goals. This edition includes an afterword by Lewis, covering events after the lectures were delivered in fall 2005.

The Invisible Cure Helen Epstein 2012-09-27 In 1993, Helen Epstein, a scientist working with a biotechnology company searching for an AIDS vaccine, moved to Uganda, where she witnessed first-hand the suffering caused by the HIV virus. The Invisible Cure, dramatic, illuminating and beautifully written, recounts the struggle of international health experts, governments and ordinary Africans to understand the devastating spread of HIV in Africa, and traces how their responses to the crisis have changed in light of new medical developments and political realities. The AIDS epidemic in Africa is uniquely severe. It is partly a consequence of the political, social, and economic upheavals of the past century, which have left millions of Africans adrift in an increasingly globalized world. Their poverty and social dislocation have generated an earthquake in gender relations that has had devastating consequences for the spread of the HIV virus. Epstein argues that there are ways to address this crisis that may be simpler than many people imagine. A deeply affecting story of scientific breakthroughs and false starts, and of the human costs of policymakers' missteps and inaction, The Invisible Cure will change the way we think about AIDS, a disease without precedent.

The Sovereign Individual James Dale Davidson 2020-02-04 Two renowned investment advisors and authors of the bestseller The Great Reckoning bring to light both currents of disaster and the potential for prosperity and renewal in the face of radical changes in human history as we move into the next century. The Sovereign Individual details strategies necessary for adapting financially to the next phase of Western civilization. Few observers of the late twentieth century have their fingers so presciently on the pulse of the global political and economic realignment ushering in the new millennium as do James Dale Davidson and Lord William Rees-Mogg. Their bold prediction of disaster on Wall Street in Blood in the Streets was borne out by Black Tuesday. In their ensuing bestseller, The Great Reckoning, published just weeks before the coup attempt against Gorbachev, they analyzed the pending collapse of the Soviet Union and foretold the civil war in Yugoslavia and other events that have proved to be among the most searing developments of the past few years. In The Sovereign Individual, Davidson and Rees-Mogg explore the greatest economic and political transition in centuries -- the shift from an industrial to an information-based society. This transition, which they have termed "the fourth stage of human society," will liberate individuals as never before, irrevocably altering the power of government. This outstanding book will replace false hopes and fictions with new understanding and clarified values.

Ashamed to Die Andrew J. Skerritt 2011 By focusing on a small town in South Carolina, this study of the HIV/AIDS crisis in the South reveals the hard truths of an ongoing and complex issue. Skerritt contends that the United States has failed to adequately address the threat of HIV and AIDS in communities of color and that taboos about love, race, and sexuality--combined with Southern conservatism, white privilege, and black oppression--continue to create an unacceptable death toll. The heartbreak of America's failure comes alive through case studies of individuals such as Carolyn, a wild child

whose rebellion coincided with the advent of AIDS, and Nita, a young woman searching for love and trapped in an abusive relationship. The results are most visible at the town's segregated burial ground where dozens of young black men and women who have died from AIDS are laid to rest. Not only a call to action and awareness, this is a true story of how persons of faith, enduring love, and limitless forgiveness can inspire others by serving as guides for poor communities facing a public health threat burdened with conflicting moral and social conventions.

Sex Workers in the Maritimes Talk Back Leslie Ann Jeffrey 2011-11-01 Sex workers are often the "objects" of study for academics and policy makers. Theories about their lives and the policies that affect their work are usually developed without input from the sex workers themselves, as they are rarely seen as capable of analyzing the social and political world in which they work. In this book, however, sex workers set the tone. Leslie Ann Jeffrey and Gayle MacDonald interview sex workers in three Maritime cities and those who work around them: police, health-care providers, community workers/advocates, members of neighbourhood associations, and politicians. The sex workers discuss such issues as violence and safety, health and risk, politics and policy, media influence, and public perception of the trade, portraying the best and the worst facets of their working lives and expressing sentiments refreshingly at odds with commonly held opinions. Given recent Parliamentary recommendations to decriminalize prostitution, *Sex Workers in the Maritimes Talk Back* represents a timely shift to public discussions about sex work. Engaging and accessible, this book will be of interest to public policy practitioners, students of social and political science, community advocates, police, and sex workers and their families.

The Wisdom of Whores Elizabeth Pisani 2009-05-12 This controversial book addresses how sex and drugs have turned the global epidemic of HIV into a billion-dollar-a-year industry. Epidemiologist Elizabeth Pisani takes a no-holds-barred approach to finding out exactly why 40 million people are living with HIV and 28 million have already died of AIDS when we have the knowledge, the money, and the means to wipe out the disease in 90 percent of the world.

Measures for Community and Neighborhood Research Mary L. Ohmer 2018-07-19 *Measures for Community and Neighborhood Research* is the first book of its kind to compile measures focused on communities and neighborhoods in one accessible resource. Organized into two main sections, the first provides the rationale, structure and purpose, and analysis of methodological issues, along with a conceptual and theoretical framework; the second section contains 10 chapters that synthesize, analyze, and describe measures for community and neighborhood research, with tables that summarize highlighted measures. The book will get readers thinking about which aspects of the neighborhood may be most important to measure in different research designs and also help researchers, practitioners, funders, and others more closely examine the impact of their work in communities and neighborhoods.

And the Band Played On Randy Shilts 2011-11-03 In 1981, the year when AIDS came to international attention, Randy Shilts was employed by the San Francisco Chronicle as the first openly gay journalist dealing with gay issues. He quickly devoted himself to reporting on the developing epidemic, trying to understand the cultural, medical and political impact of the disease on the gay community and United States society as a whole. Extensively researched, weaving together personal stories with political and social reporting, *And the Band Played On* is a masterpiece of investigative reporting that led to Randy Shilts being described as "the pre-eminent chronicler of gay life" by The New York Times. Shilts exposed why AIDS was allowed to spread - while the medical and political authorities ignored (and even denied) the threat. It was awarded the Stonewall Book Award, became an international bestseller translated into 7 languages, and was made into a major movie in 1993 starring Richard Gere and Sir Ian McKellen. *And the Band Played On* is one of the great works of contemporary journalism, and provides the foundation for the continuing debate about the greatest medical epidemic faced in our time.

The Wisdom of Whores: Bureaucrats, Brothels, and the Business of AIDS Elizabeth Pisani 2009-09-21 "[A] rollicking, eye-opening, hilarious account of the underbelly of international AIDS research." Carlin Romano, Philadelphia Inquirer As an epidemiologist researching AIDS, Elizabeth Pisani has been involved with international efforts to halt the disease for fourteen years. With swashbuckling wit, fierce honesty, and more than a little political incorrectness, she dishes on herself and her colleagues as they try to prod reluctant governments to fund HIV prevention for the people who need it most: drug injectors, gay men, sex workers, and johns. With verve and clarity, Pisani shows the general reader how her profession really works; how easy it is to draw wrong conclusions from "objective" data; and, shockingly, how much money is spent so very badly.
